1. INTRODUCTON

1.1 Overview

About a website that represents an institute

1.2 Purpose

An educational website provides information about courses, application requirements, professors, exams and much more. Educational websites are quite specific: you won't see the bright CTAs here, but clear and concise evidence **of** reliability and quality

2. LITERATURE SURVEY

2.1 Existing problem

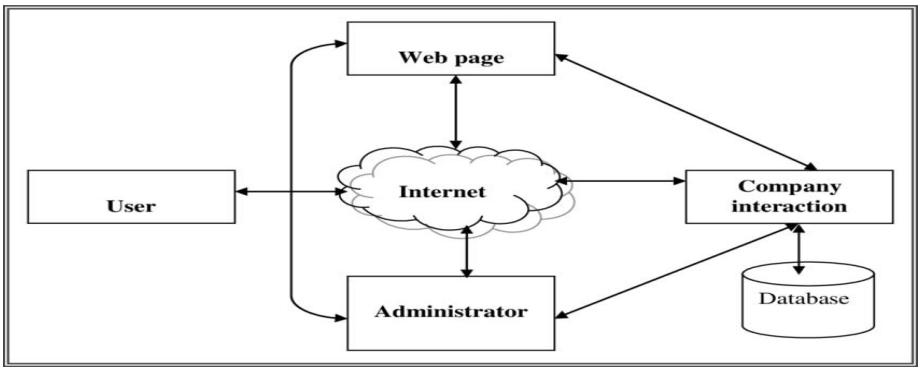
Although people have to visit the institute to know the different types of courses they offer and know the trends of the institute and parents of the student have to visit to know the students progress towards the students and cocurricular activities

2.2 Proposed solution

I created a website where every student can know the whereabouts of that particular institute by visiting the website on figure tips .A parent can know the how many placements and collage/institute profile easily

3. THEORITICAL ANALYSIS

3.1 Block diagram



3.2 Software designing

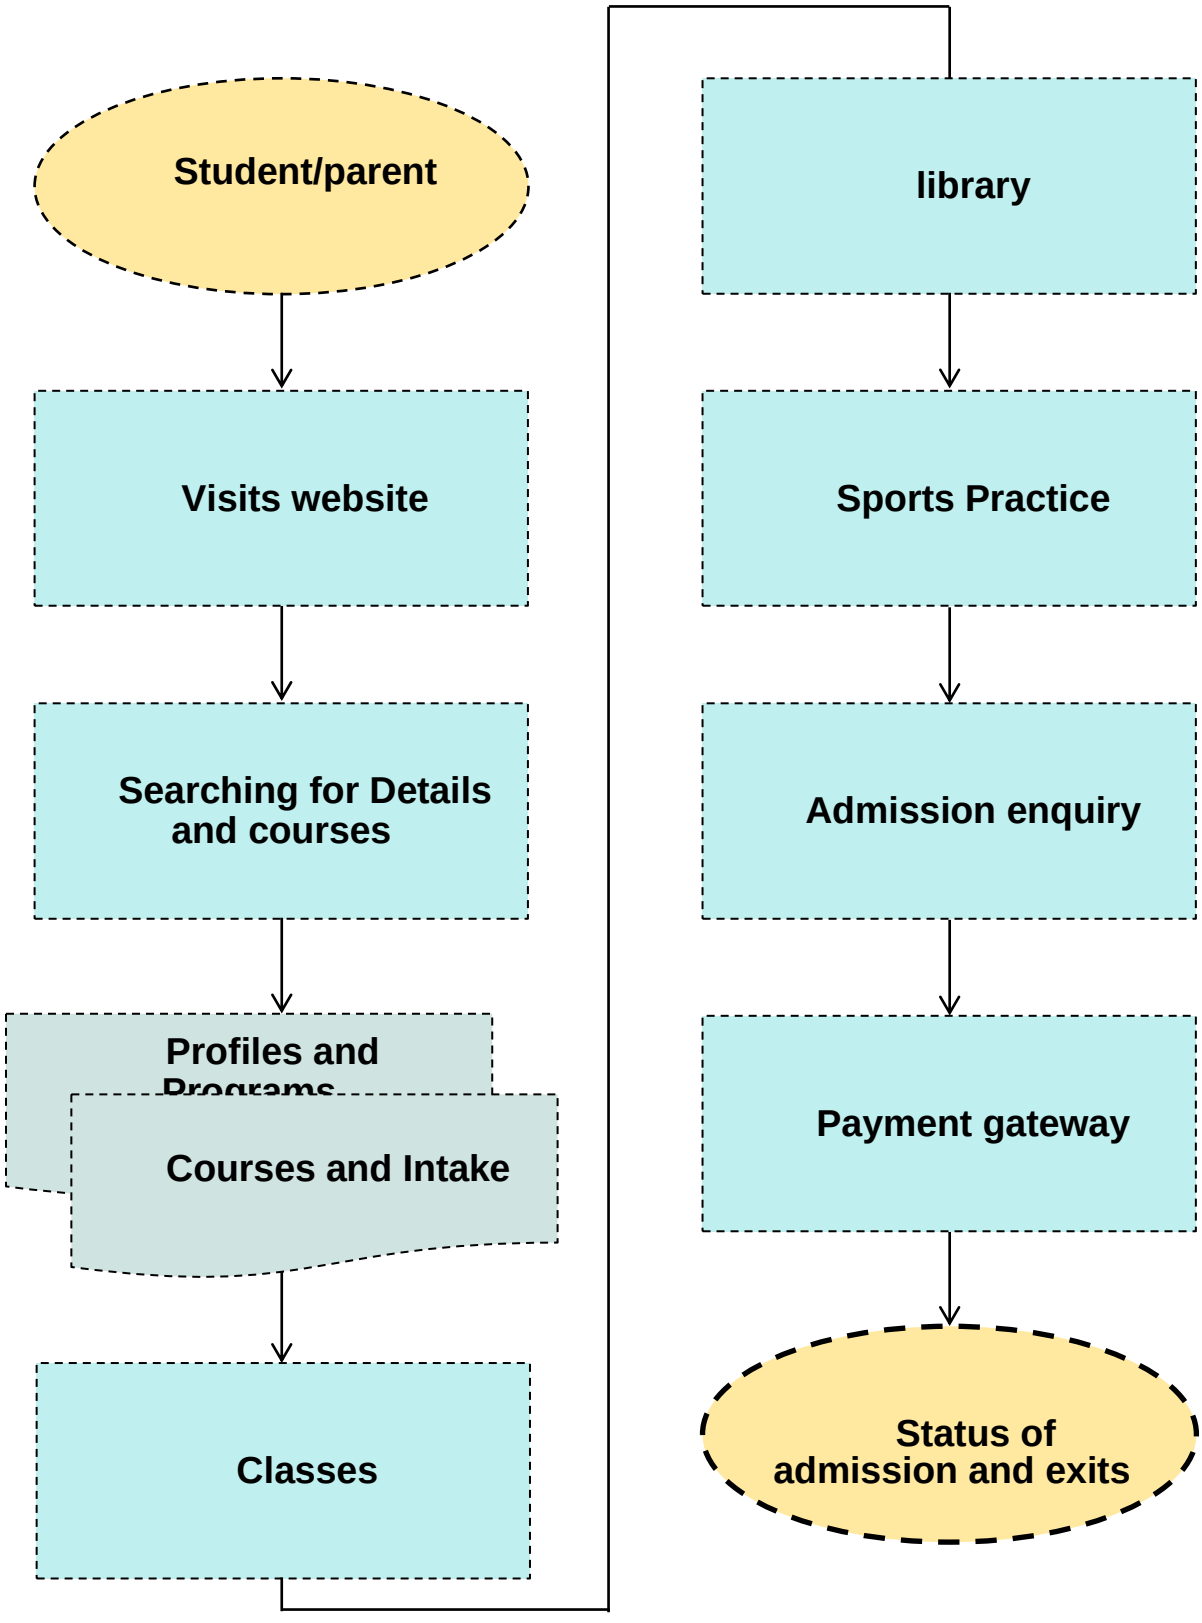
I have designed a website by using word press which helps a student and parent or any other people to know the where abouts of the institute and immediately they can enquire about what they need from the institute

4. EXPERIMENTAL INVESTIGATIONS

I have encountered with many peoples who are experiencing physical meets in my personal view we are in 21st century so everything is digitalizing so made me to this website.

5. FLOWCHART

EDUCATIONAL WEBSITE FLOWCHART



5. ADVANTAGES & DISADVANTAGES

The only disadvantage is we cannot see with naked eye and everything can be known through website.

6. RESULT&CONCLUSION

I have created a website which is working fine and I hope it will help people to adapt digit and virtual tours of institutes and much more.
